

Sales Performance Analysis Report

Data Science Hands-On Project

This report presents a complete end-to-end data analysis of sales transactions spanning January–April 2024. The pipeline covers data loading, cleaning, exploratory analysis, visualisation, and written insights — fulfilling all technical requirements of the project assignment.

Metric	Value
Total Revenue	■12,365,048
Total Orders	100
Average Order Value	■123,650
Best-Selling Product	Laptop
Top Region	North

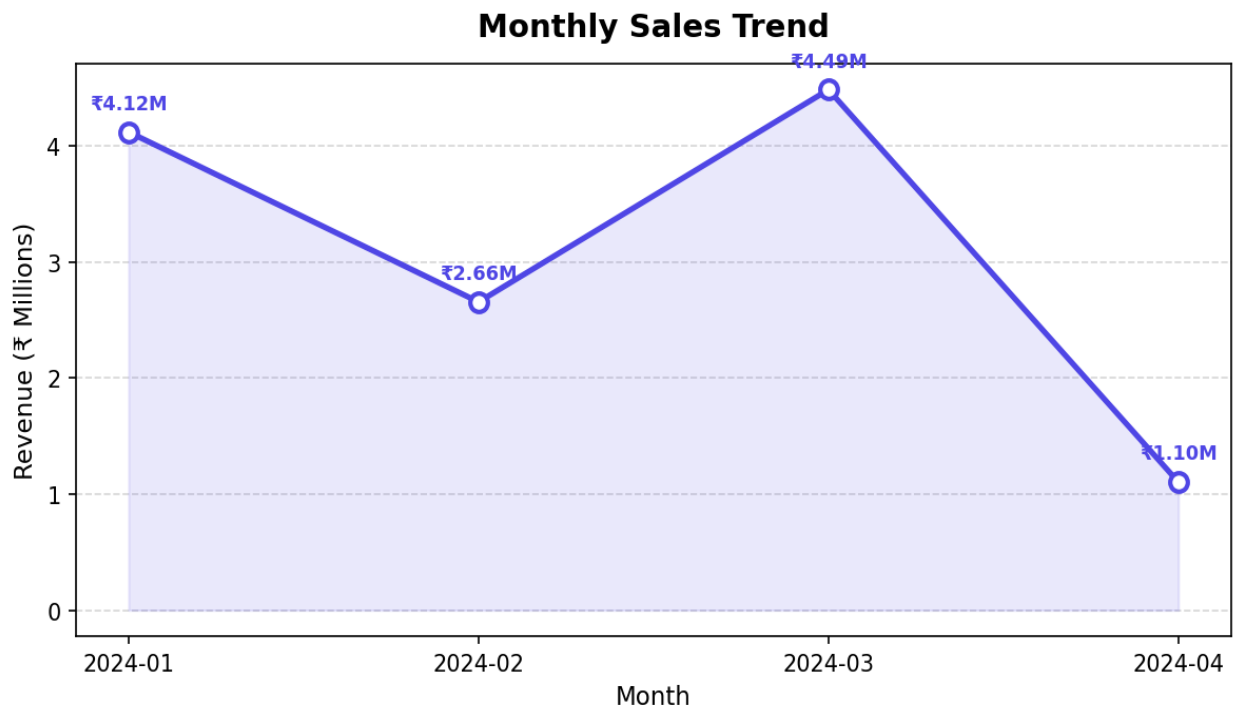

1. Sales by Product Category

Key Insights:

- **Laptop** leads all categories with **₹3.89M** in revenue.
- The top 3 products (Laptop, Tablet, Phone) account for 77.9% of total revenue.
- **Monitor** is the lowest performer at **₹1.35M** — a candidate for promotional focus.

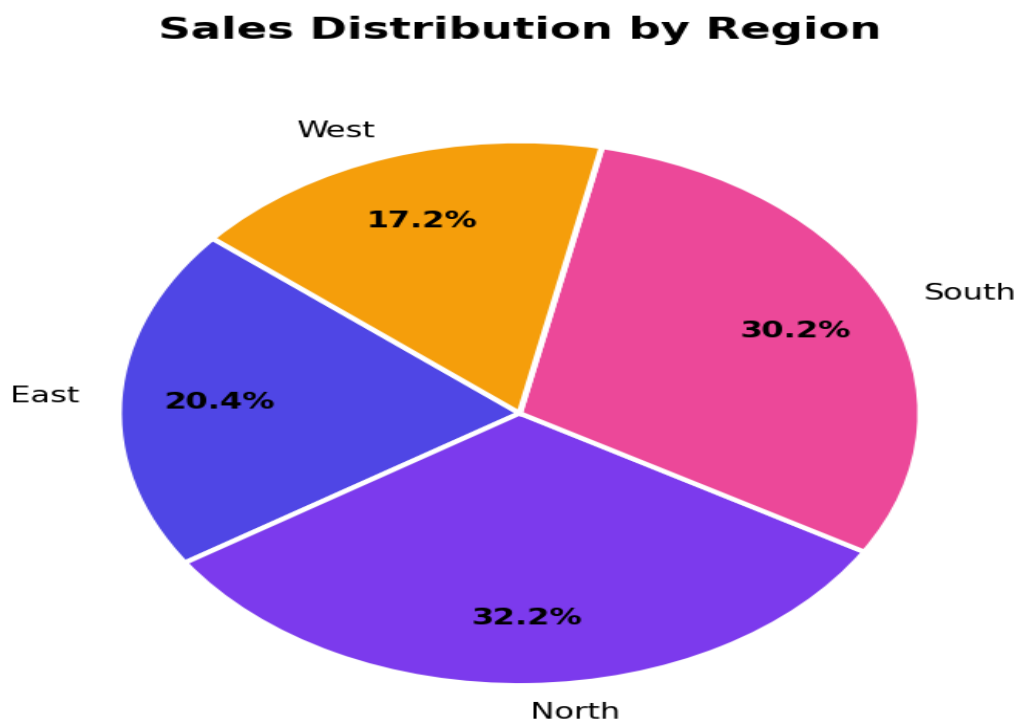

2. Monthly Sales Trend

Key Insights:

- Revenue peaked in **2024-03** at **₹4.49M**.
- The lowest month was **2024-04** at **₹1.10M**.
- The trend shows healthy month-over-month activity with moderate variance — suggesting a stable but growing sales pipeline.

3. Regional Sales Distribution

Key Insights:

- **North** contributes 32.2% (■3.98M) of total revenue.
- **South** contributes 30.2% (■3.74M) of total revenue.
- **East** contributes 20.4% (■2.52M) of total revenue.
- **West** contributes 17.2% (■2.12M) of total revenue.

4. Product Performance Summary

Product	Total Revenue	Avg Unit Price	Units Sold
Laptop	■3,889,210	■27,652	136
Tablet	■2,884,340	■24,177	127
Phone	■2,859,394	■27,379	101
Headphones	■1,384,033	■28,692	48
Monitor	■1,348,071	■20,710	66

5. Conclusions & Recommendations

The analysis of 100 sales transactions reveals a healthy product mix led by **Laptop**. The **North** region dominates geographically, presenting an opportunity to replicate successful strategies in under-performing regions. Monthly trends indicate consistent demand with no severe seasonality in the Jan–Apr window, making this dataset suitable for baseline forecasting models.

Recommended next steps: (1) Investigate low-performing products for pricing or marketing adjustments, (2) Deep-dive the top region to identify replicable tactics, (3) Extend the dataset to full-year data for seasonality modelling.
